

Introducing our new publisher and new features of the International Journal of Maxillofacial Prosthetics

Mahmoud E. Elbashti, BDS, MSc, PhD 
Editor-in-Chief
International Journal of Maxillofacial Prosthetics
Lecturer, Tokyo Medical and Dental University, Tokyo, Japan

It has been more than 5 years since we started publishing the International Journal of Maxillofacial Prosthetics (iJMP). During this time, five volumes have been issued with various articles including original research, reviews, case reports, and techniques, and all this, without a publisher. It is with great pleasure that we announce that, since the beginning of 2022, [Digitodontics International Academy](#) (DIA) has become the official publisher of the International Journal of Maxillofacial Prosthetics. DIA is a digitized-focus academy that stands for high-quality education, conception, and publishing, and bring heaps of new features to our Journal including:

3D PDF Articles: In 2019, we introduced three-dimensional (3D) PDF articles for effective interactive digital visualization of our maxillofacial prosthetic publications. 3D PDF is a special service that allows our readers to interact with 3D models within PDF articles using the conventional adobe reader. This service also enables readers to expand access to the most important aspects of the information within 3D structures.

Audio Abstracts: From 2022, iJMP introduces a new feature for all its published articles which is the Audioabstract. It is an auto-reading abstract text feature that helps readers quickly understand what the article is about and appreciate its relevance. All the abstracts within the PDF article will be provided with this feature.

Video Abstracts: In 2022, iJMP also introduced a new optional feature for its published articles. Based on the authors' request and for an additional fee, iJMP can create a Video abstract for the published article. It is a 3-minute documentary-style video, giving authors' research more visibility, especially through social media, and helping readers quickly understand what an article is about and appreciate its relevance.

Poster Abstracts: Additionally, iJMP will be active on most social media platforms such as [Facebook](#), [Instagram](#), [Linkedin](#), and [YouTube](#) through our publisher by presenting Poster abstracts for some of our articles.

We believe that we are now qualifying for indexation of our journal. Therefore, it is the intention of the Editorial Board to start applying for the relevant indexes such as DOAJ, Emerging Sources Citation Index, Scopus, and PubMed. We are taking all possible measures in accordance with the [Principles of Transparency and Best Practice in Scholarly Publishing](#) to ensure that we are easily accepted for prominent indexes. We do not believe in [fake indexes](#) and do not intend to be indexed by any of them.

Finally, we call on all researchers in our field to explore iJMP's [website](#), read its policies and consider submitting their manuscripts through our online [submission](#) system.
